SUMMARY

Full-Stack Software Engineer with 5+ years of experience building scalable, AI-powered, and data-driven web applications. Skilled in front-end and back-end development, API design, and AWS cloud infrastructure, with a proven record of delivering high-performance search systems, automated data pipelines, and LLM-integrated features that power secure, reliable, and user-focused products.

WORK EXPERIENCE

Software Specialist

May 2026 - Present

Mercor | *San Francisco, CA*

- Evaluate the quality of AI-assisted software development traces to enhance model training and evaluation.
- Assess end-to-end coding sessions produced with AI-assisted developer tools for correctness, soundness, and reasoning.
- Provide clear, rubric-based written feedback to improve AI model outputs.
- Collaborate with AI research teams to ensure consistency and relevance in training data.

Full Stack Engineer

Apr 2024 - Present

Avalon AI | *New York, NY*

- Collaborated with stakeholders to translate complex requirements into technical specs for a HIPAA-compliant platform.
- Architected and delivered a multi-tenant healthcare platform using Next.js, AWS Amplify, API Gateway, Lambda, DynamoDB, and OpenSearch, enabling sub-second search across 200K+ providers with zero-downtime index rollovers.
- Engineered an event-driven pipeline with AWS Step Functions for data transformations, reindexing, and monitoring.
- Created CI/CD pipelines with automated test gates and linting, cutting release cycle by 25% and raising reliability to 99.9%.

Application AI Engineer

Dec 2020 - Nov 2023

Amplify AI | *Palo Alto, CA*

- Configured, trained, and maintained 100+ AI chatbot instances and user engagement services across third-party platforms.
- Developed a toolkit (Svelte/React) that cut customization cycles from days to hours, reducing onboarding time by 50%.
- Strengthened platform security with MFA, key rotation, and session validation, cutting auth-related incidents.
- Modeled and optimized data across SQL/NoSQL stores, adding indexing and query tuning to lower latency.

EDUCATIONAL HISTORY

Postgraduate in Full Stack Web Development

California Institute of Technology - 2022

- **Capstone**: Full-stack bank portal with CI/CD pipeline (Angular, Java, Spring Boot, MySQL, AWS, Docker)

Bachelor of Science in Software Engineering

University of California, Irvine - Class of 2020

- **GPA:** 3.5 | **Honor Society:** NSLS (ΣΑΠ)
- **Capstone**: Admin Web Portal for EVSE mobile app (MERN)
- **Publications**: Mapping and Taking Stock of the Personal Informatics Literature, ACM Journals | Dec 2020

TECHNICAL SKILLS

- **Programming**: JavaScript/TypeScript, Python, Java, Bash
- **Frontend**: React.js, Next.js, Svelte.js, Angular, Tailwind
- **Backend & API**: Node.js, Express, Flask, FastAPI, Spring Boot, REST, GraphQL
- **Database, ETL & Search**: MongoDB, MySQL, PostgreSQL, DynamoDB, Redis, OpenSearch
- **Cloud (AWS):** API Gateway, EC2, Lambda, SQS, SES, CloudFormation, Step Functions, Glue, CloudWatch
- **Testing & DevOps**: Jest, Pytest, Playwright, Postman, Git, GitHub Actions, Jenkins, Terraform, Docker, Kubernetes
- **AI Tools**: Codex, Copilot, Claude, Windsurf
